

Antistaticity declaration

HYFLEX® 11-816

Herewith, I confirm that the Ansell HYFLEX® 11-816 can be considered as an electrostatic dissipative material (= anti-static) as per the requirements of EN 1149-5 (= electrostatic performance requirements for protective clothing).

In accordance to the EN 420:2003 standard (= general requirements for Protective gloves), electrostatic properties need to be tested as per the test methods defined in the EN 1149 standards. Under this standard, our HYFLEX® 11-816 gloves achieved a half decay time of 0.19 second whilst the EN 1149-5 requires < 4 seconds.

As such, we can confirm that **HYFLEX® 11-816 is anti-static as per EN 420:2003 and EN 1149:2008.**
